Scaling new heights of success and leaving a mark of excellence in assignments which involve analytical capabilities and professional growth

WORK EXPERIENCE

Tata Consultancy Services – Java Developer

March 2018 – Current   Noida, UP

- Worked in agile framework involved in analysis, specification, design, and implementation and testing phases of Software Development Life Cycle SDLC.
- Worked on java development including designing of applications, conducting gap analysis including validation of needs in conjunction with onsite & offsite teams
- Implemented REST Microservices using spring boot.

- Monitored service-based project progress & outstanding issues and ensured the quality & timeliness of the deliverables; prepared monthly dashboard, project health check metrics and weekly & fortnightly status reports as well as extended post-implementation support to team members by identifying defects, inconsistencies & errors

- Designed & developed user interfaces to internet / intranet applications by setting expectations & features priorities throughout development life-cycle; determined design methodologies & tool sets and completing programming using languages & software products; designed and conducted tests

- Worked with onsite client to track status & issues in offshore development mode; conducted reviews of codes & test cases and analysed change requests / enhancements

- Completed product development as per requirements, schedules & activities; contributed to team meetings, development & production problems across multiple environment / operating platforms

- Developed high-volume & low-latency applications and microservices for mission-critical systems and delivered on high-availability & performance

- Implemented all components following test-driven development methodology using Junit.

Kamdhenu Limited - Software Engineer

October 2017 - February 2018   Delhi

- Supporting continuous improvement by investigating alternatives & technologies and presenting these for architectural review
- Creating the releases of software components
- Assuring that the designs are in compliance with specifications
- Meeting with client, collecting requirement of product and converting into technical specification
